

IBM GLOBAL HIGH AVAILABILITY MAILBOX

Robust & Reliable Message Storage From Anywhere

No matter what industry you operate in, modern businesses are under constant pressure to sustain operations around the clock, and operate without interruption. This new reality also necessitates the ability to exchange and restore a variety of business documents on the go and in real-time.

Access Your Data 24/7

As an extension to IBM Sterling B2B Integrator or Sterling File Gateway, Global Mailbox provides data storage across geographically distributed locations. This data is then routed to the nearest available server, and replicated quickly across data centers so that the data is always available. You can also deploy an active/passive disaster recovery architecture that can react to critical failures in near real-time to minimize the impact to operations.

Optimize Your File Transfers

Even with Managed File Transfer solutions, there is still a dependency on the availability of both the sender and receiver's B2B platforms to make the file exchange successful. As a result, a potential gap still exists in preventing the successful transfer of a file, especially a business critical one. With IBM's Global High Availability Mailbox capabilities on both sender and receiver B2B platforms, you can close the availability gap by ensuring both ends of a point-to-point file transfer are operating in a highly available mode.

IBM Global High Availability Mailbox:

Purpose built multi-data center mailbox architecture

Geographically distributed for maximum accessibility

Eliminates the need for custom solutions, database replication, or other approaches

Delivers a consistent view so you know exactly where your files are

A Consistent View of Your Data, Every Time

IBM Global Mailbox allows you to specify which trading partner data is geographically distributed in addition to configurable capabilities to decide when this replication happens, ensuring data always exists in at least two places. It provides a consistent view across all data centers and ensures that you have access to the data without interruption to the business or manual intervention by the administrator.

Why CoEnterprise

As an IBM Platinum Business Partner and IBM B2B Partner of the Year award-winner four of the last five years, we have solidified our reputation in the field and are trusted by some of the world's top organizations to solve complex business problems. Our team works in direct collaboration with IBM product management, giving you access to the top providers of B2B software and best practices/training available in the world.
